

ABSTRACT OF THE DISCLOSURE

The disclosed embodiments relate to the field of remote server management. More particularly, the embodiments relate to providing an embedded JTAG master in a remote server management controller. In an exemplary embodiment, the JTAG master is adapted to perform command and control functions on a wide range of integrated circuit components within a managed server. The JTAG master may also be configured to provide communication according to the In-Target Probe (ITP) and In-Circuit Emulation (ICE) test methodologies.
